

Imperator®

Imperator Check List

- Read the label before use
- Determine pest species present
 - Are they on the Imperator label?
- Does the situation require knock-down and residual insect control?
 - If knockdown of insects is required, use Imperator
 - If residual insect control is required, another product should be used
- Measure the volume you need to treat: length x width x height. For example, if ceiling height is 2.5m and floor area is 11m x 8m, then one 31g Imperator unit will be required
- Advise local fire brigade, neighbours and employees if appropriate about treatment and generation of smoke
- Turn Off all smoke detectors for the duration of the treatment
- Ensure that the area treated can be closed for at least 3h after treatment. For best results leave area closed overnight.
- Close all windows – keep the area airtight
- Before lighting Imperator smoke generators
 - Make sure that everyone left the room
 - Remove (or cover) fish tanks, pets, birds, sensitive fabrics (silk, rayon)
 - Remove (or cover) food, food utensils, food processing areas, pet bowls
- Put a warning sign on the door: “Treatment in progress, do not open before...”
- Place the Imperator canister on a fireproof base (iron bucket, ceramic tile, etc.) – recommendation >700mm in diameter
- If more than one unit is required :
 - Place canisters to obtain the most even coverage of the room
 - Always ignite furthest from exit first
- After treatment:
 - Remove all Imperator units
 - Remove dead insects
 - Ventilate for at least 30min
- Upon re-entry immediately reactivate smoke detectors

Imperator essentials:

- Lighter or matches
- Fireproof base
